Evaluation: paired against the strongest re-tuned classical controller (plan v6)

Learned controller
frozen after selection

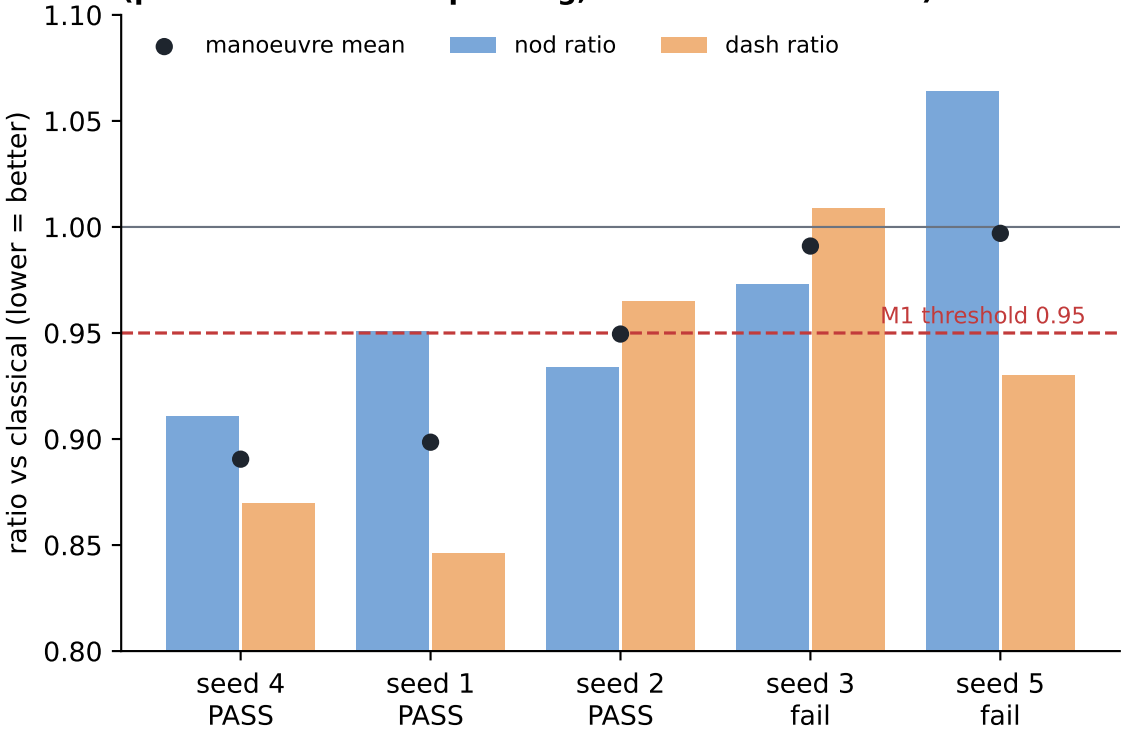
Strongest classical
2-D set-point schedule, one per task and direction class

Fresh blind set
nod 32 (8 / dir.)
dash 32 (4 / dir.)
same cases for both

ratio per task

$$\text{mean}_{cases}\frac{J_{learned}}{\text{median}_{class}J_{classical}}$$

< 1 = better than classical

Also: 4 ablations (clamp_fast, nodelay_all, noref, nopulse) and a same-size ANN.


Reference: pitch-plane version (round 5), M1 test 3 / 5 pass (plan v6 verdict M2: pending, same threshold 0.95)
