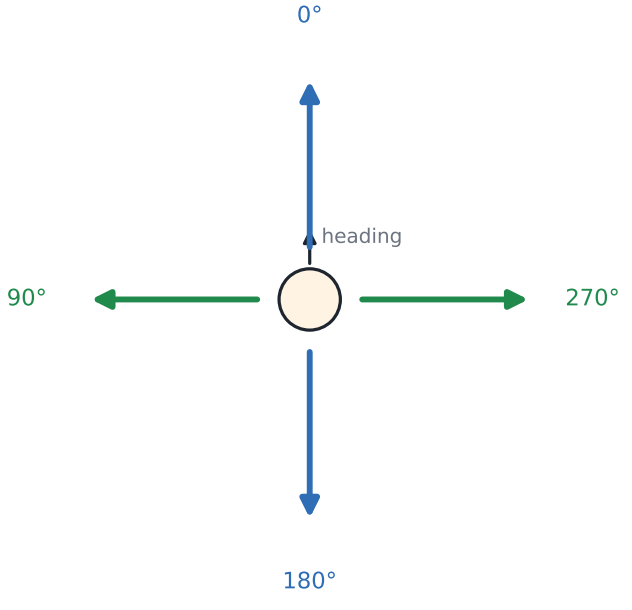
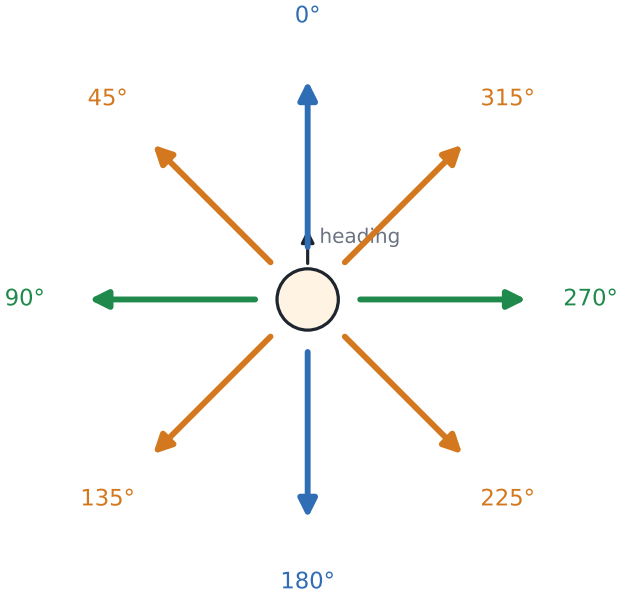
Plan v6 tasks: nod in 4 directions, dash in 8 directions (heading frame at the command onset)

a nod: tilt 30° toward φ, recover



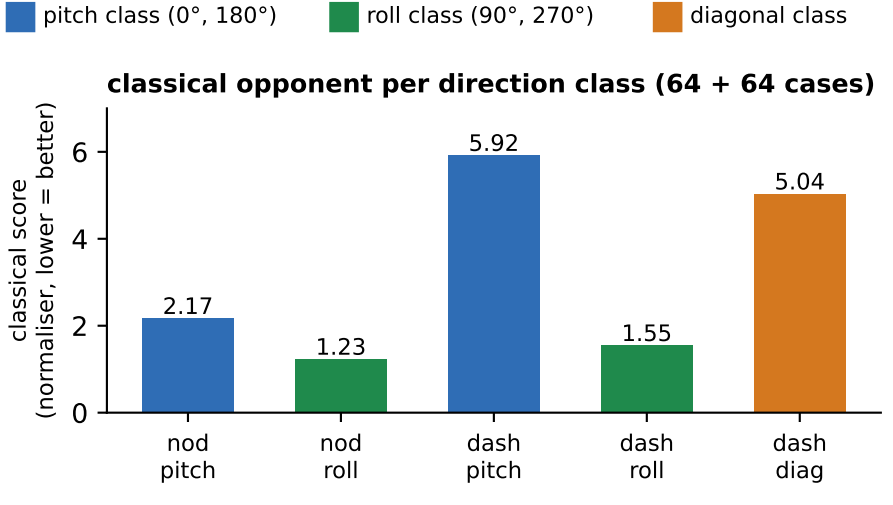
forward = up, left = left

b dash: 0.15 m along φ and stop



forward = up, left = left

attitude command for motion direction φ

$$(\text{roll}, \text{pitch})_{ref} = A \cdot (-\sin\varphi, \cos\varphi)$$


measured: pitch+ → forward 5.4 cm, roll+ → right 6.1 cm
(0.2 rad for 0.4 s; signs.json). Pulses give pitch torque only.
